DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 9-14 are, drawn to a semiconductor device, classified in class 257, subclass 1+.
 - II. Claims 1-8 are, drawn to a method of making a semiconductor, classified in class 438, subclass 305.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Group II and Group I are related as process of making and product made.

The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case unpatentability of the group I invention would not necessarily imply the unpatentability of the group II invention, since the device of the group I invention could be made by processes materially different from those of the group II invention, for example the silicon oxide layer can be deposited by methods other than oxygen plasma treatment, can be made by gaseous diffusion, CVD and PECVD.

2. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
